

Enrollment Verification Control Plan: 2009-2010

Following the improvement plan, changes were implemented in the enrollment verification process beginning with the Fall Semester, 2009.

Enrollment for the fall was up 18% compared to last fall; however the number of student petitions submitted for reinstatement was lower. This suggests that the processes implemented above has been effective in decreasing the number of student petitions submitted.

The reason for non-attendance varied from adding late, to instructor reporting error to student problems. The adding late and instructor reporting error was considerably lower than in previous semesters. The student problems were higher compared with previous semesters, due primarily to illness (flu) and living arrangements.

We will continue to implement the present changes and monitor performance going forward.
